"The Relation Between Agricultural Architecture and Animal Hygiene."

Budapest, Magyar Allatorvosok Lapja, Vol 18, No 8, Aug 1963, pages 337-338.

Abstract: In the opinion of the author, agricultural buildings have to be planned not only to satisfy the requirements of the animals but also to create conditions under which maximal utilization of fodder is achieved. Since fodder represents the largest fraction of the cost of raising animals, the providing of optimal temperature conditions in the stalls is of utmost economic significance. In addition to modern housing, all other requirements of the animals have to be satisfied by the cooperation of various specialists. No references.

SOURCE: Geodezia es kartografia, v. 17, no. 2, 1965, 123-127

TOPIC TAGS: geodesy, geodetic survey, map, cartography

ABSTRACT: The preparation of Hungarian geodetic maps is governed by laws originating as far back in the past as 1849. These laws were reviewed with the aim of assessing the reliability of geodetic maps prepared during various periods. It was possible to establish with a reasonable degree of accuracy the probable reliability of a geodetic map from the date of its preparation. Some data for obtaining the reliability factors were presented and discussed. Orig. art. has: 9 formulas, 6 tables. [JPRS]

Method

3

Compared to the ordinary scaffolding and formwork which consumes great quantities of timber in the construction of silos only the sliding formwork can be registered as progress so far. The sliding formwork has proved most satisfactory in building detached cooling towers and silos. However for four or more interconnected silos the sliding formwork meets with difficulties due to the curved shape of the surface between the individual silos each of which requires a separate lifting scaffold. The walls of the silo at Tiszapolgar are made of prefabricated moulded concrete elements which makes possible the use of a self-lifting single-level scaffold whereby all the material and work required for the formwork and scaffolding can be dispensed with. A ten-unit silo may thus be constructed with practically no timber at all. The use of moulded elements in the construction of silos is not a new conception however the employment of self-lifting scaffolds for this type of construction is novel and ingenious.

Title : Problems in Pasture Improvement.  
(Voprosy uluchsheniya pastbishch).

Orig Pub : Magyar mezogazd., 1957, 12, No 8, 14.

Abstract : To improve pastures which have not been cared for through centuries, it is primarily necessary to apply the enclosure-pasturing system. The application of N in the spring as well as N and P in fall considerably increases productivity. In order to renew old pastures, it is necessary to plow them gradually, apply organic fertilizer and sow them with worthwhile grasses.

"Prednisolone Pancreatitis."

Budapest, Orvosi Hetilap, Vol 107, No 48, 27 Nov 66, pages 2283-2285.

Abstract: [Authors' Hungarian summary] A patient suffering from coronary occlusion accompanied by Adams-Stokes syndrome was successfully treated with prednisolone. On the twelfth day of the treatment, the development of acute pancreatitis was observed. The patient received a total of 520 mg prednisolone. The pancreatitis was quite responsive to Trasylol and neomycine treatment. Complete recovery ensued. The probable correlation between prednisolone treatment and the pancreatitis is discussed together with the diagnostic and therapeutic problems of the case. 8 Hungarian, 33 Western references.

"Construction Problems of the Scintigraph Used as a Medical Diagnostic Device"

Budapest, Finommechanika, Vol 6, No 2, Feb 1967, pp 56-60.

Abstract: The construction, operation, performance, and medical applications of scintiscanners were described and discussed. They were evaluated in terms of area scanned, scanning rate, method of recording, type and dimensions of the crystal, collimators, target illumination, line distance, mapping scale, and other relevant characteristics. These data were provided for a number of commercially available devices. An overall quality ranking was presented for the scintigraphs evaluated and some problems in their construction were pointed out. 8 references, including 2 Hungarian, 2 German, and 4 Western.
